PROJECTS

Online Ordering System with 3D Viewing and Live Order Tracking

E-commerce

HTML, CSS, JavaScript, PHP, SSE(Server Sent Events), MySQL, Leaflet.js

- Developed a full-stack e-commerce platform with a user-friendly ordering system.
- Added a 3D model API for better product visualization and viewing.
- Implemented live order tracking with Leaflet.js and Server-Sent Events.
- Developed the full-stack logic for a reliable ordering and checkout process.

WordPress-Based Online Ordering System

E-commerce

WordPress, Elementor, WooCommerce, WPForms, WP Fastest Cache, Wordfence

- Developed an online ordering system using WordPress and WooCommerce to streamline company sales.
- Designed responsive interfaces with Elementor to ensure a modern and user-friendly experience.
- Utilized WPForms to build and manage various interactive forms throughout the website.
- Implemented Wordfence for security and WP Fastest Cache for enhanced loading speeds.

Heron - Job Application Tracker (In Progress)

Tracking System

Next.js, React, Prisma ORM, PostgreSQL, Better Auth, Zod, Shadcn UI, Docker, Vercel

- Developed a job application tracker using Next.js and React to help job seekers organize their applications.
- Built responsive user interfaces using Tailwind CSS and Shadcn UI components.
- Integrated Better Auth to handle secure user authentication and session management.
- Integrated Zod for secure data validation and error management.
- Implemented PostgreSQL with a Docker-based local setup and Neon for production data management.
- Implemented Prisma ORM to streamline database management and ensure type-safe queries.
- Deployed the system using Vercel, ensuring a fast and reliable hosting environment.
